- Main project on Bridgeless isolated Zeta-luo converter based EV charger during (Jan 2023 to May 2023).

Full Stack development Projects

Anime website by using Login_page with Mysql database connectivity and JSP

HTML and CSS : A login form where users can enter their username and password.

Servlet : The Servlet is mainly for entering into the Anime Home page by checking that the valid user is logging in with the password which is stored in Mysql database .

Mysql Database : If the username and password which is linked to the mysql database can login and enter to the anime website homepage .

Homepage : After successful login, users are redirected to this page. It contains a header with links to different sections of the website like Homepage, Watchlist, Settings, Help, and Logout.

The content section displays information about the streaming platform, including a brief description and a button to watch the latest episodes. There's also a section showcasing popular anime titles with images, descriptions, and buttons to watch episodes.
